Experiment -1

AIM: To create an AWS free tier account to provision the resources.

Description:

Amazon Web Services (AWS) is a cloud platform that offers computing power, storage, databases, networking and security as on-demand services over the internet. Resources are created and managed from the AWS Management Console, and billing is based on actual usage (pay-as-you-go).

The AWS Free Tier lets a new account try out selected services free of charge, within fixed usage limits and for a limited period, which makes it suitable for learning and practising cloud concepts at little or no cost.

Once the account is ready, it can be used to work with services such as:

1. Amazon EC2: virtual servers (instances) that run in the cloud.
2. Amazon S3: scalable object storage for files and data.
3. Amazon VPC: an isolated virtual network for AWS resources.
4. AWS IAM: control of users, roles and access permissions.
5. Amazon CloudWatch: monitoring of resources, logs and metrics.

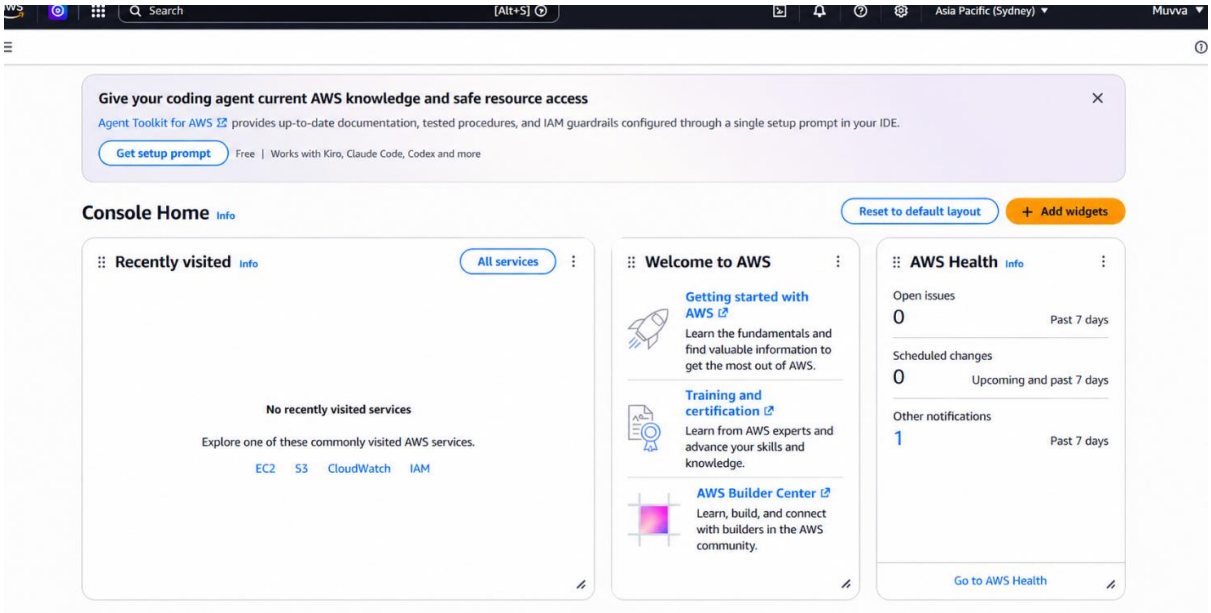

Steps:

1. Open a web browser and go to https://aws.amazon.com/.
2. Click on Create an AWS Account.
3. Enter an email address and an account name.
4. Enter the verification code sent to the email address.
5. Set a strong password for the root user.
6. Fill in the contact details and choose the account type.
7. Enter the payment card details required for verification.
8. Complete identity verification using the phone number (OTP).
9. Choose a support plan (Basic support is free).
10. Finish the sign-up and wait for the account to be activated.
11. Sign in to the AWS Management Console.
12. Select a region from the region menu at the top right.
13. Explore the services such as EC2, S3, VPC and IAM from the console search bar.
14. Open the Billing / Free Tier page to keep track of usage and charges.

Output:

The AWS account was created and the AWS Management Console opened successfully after signing in.

The account can now be used to explore and provision eligible resources such as EC2 instances, S3 buckets, VPC networks and IAM users.

Result: Thus, an AWS account was successfully created to access cloud services and provision cloud resources.
